

Cinematic Scroll Portfolio Website Guide

This is the exact process I used to create the cinematic scroll-based portfolio website.

Step 1: Create a Cinematic Video

First, you need a cinematic video.

You can use:

- Google Flow
- Veo
- Kling
- Runway
- Luma
- Any AI video generator

Simply explain your idea to ChatGPT and ask it for image prompts and video prompts.

Example:

- Sleeping → Wake Up
- Night → Sunrise
- Character Transformation
- Product Assembly
- Car Reveal
- Portfolio Transformation

My video was 16 seconds long.

Important:

The longer your video is, the longer your scroll animation will be.

Step 2: Convert Video Into JPG Frames

Now convert your video into image frames.

You can do this in two ways:

Option A:

Use any online video-to-frame converter website.

Option B:

Use Adobe After Effects.

Process:

1. Import video
2. Add video to Render Queue
3. Output Module
4. Select JPG Sequence
5. Render

You will get hundreds of image frames.

Example:

16 seconds × 30 FPS

= 480 frames

Step 3: Install Required Software

Download:

Google Antigravity

and

Node.js

Official Node.js website:

<https://nodejs.org>

Install both.

Step 4: Create Project Folder

Create a folder anywhere on your computer.

Example:

Project-1

Inside this folder place:

- Your JPG frames folder

Example:

Project-1/

```
|— frames/
|   |— frame_0001.jpg
|   |— frame_0002.jpg
|   |— frame_0003.jpg
|   |— ...
```

Keep all frames properly numbered.

Step 5: Open Antigravity

Launch Google Antigravity.

Click:

New Project

Select your project folder.

Choose:

Gemini 2.5 Pro / Gemini High (whichever is available)

Step 6: Paste This Prompt

Paste the following prompt into Antigravity:

{See below the steps}

Step 7: Let Antigravity Build

Antigravity will:

- Ask for permissions
- Create implementation plan
- Generate project structure
- Create React components
- Create frame sequence renderer
- Configure scroll animations
- Configure GSAP
- Configure Lenis

Wait for it to finish.

Step 8: Run The Project

Antigravity will usually provide a walkthrough.

Open terminal / PowerShell.

Run:

```
npm install
```

After installation finishes:

```
npm run dev
```

You will get a localhost URL.

Example:

`http://localhost:5173`

Open it in your browser.

Your website should now be running.

Step 9: Make Changes

This is the best part.

If something doesn't look right:

Tell Antigravity:

- Make scrolling smoother
- Change typography
- Improve animations
- Add portfolio sections
- Change colors
- Improve performance

It usually fixes things automatically.

Step 10: Customize For Any Niche

You can replace my concept completely.

Examples:

- Video Editor Portfolio
- Graphic Designer Portfolio
- Product Showcase
- Car Website
- Fashion Website
- Agency Website
- Personal Brand

- AI Startup Website

Simply tell ChatGPT what type of website you want and ask it to modify the prompt.

Final Result

You now have:

- Cinematic scroll animation
- Frame-sequence storytelling
- Premium portfolio website
- Fully customizable project

All generated with:

- ChatGPT
- AI Video Generator
- Google Antigravity

3D website prompt

Create a premium cinematic scroll-based portfolio website inspired by Apple product pages and Awwwards-winning immersive web experiences.

The website should feel like an emotional cinematic interactive film rather than a traditional portfolio.

TECH STACK:

- React
- TypeScript
- Tailwind CSS
- GSAP ScrollTrigger
- Lenis smooth scrolling

- HTML5 Canvas
- Framer Motion

MAIN CONCEPT:

The website uses a frame-sequence animation system controlled entirely by scroll position.

The image frames already exist locally inside the project folder.

DO NOT use video playback.

DO NOT use Three.js.

Use image sequence rendering on canvas.

IMAGE SEQUENCE SETUP:

The project contains a local folder:

/public/frames/

Inside this folder are sequential image frames:

frame_0001.jpg

frame_0002.jpg

frame_0003.jpg

...

Use these frames to create a smooth cinematic scroll animation.

FRAME SEQUENCE REQUIREMENTS:

- preload image frames efficiently
- render frames on fullscreen canvas
- map scroll position directly to frame progression
- smooth interpolation between frames
- maintain cinematic smoothness
- optimize performance aggressively
- preload nearby frames only
- avoid lagging completely

SCROLL EXPERIENCE:

The entire hero section should feel like a cinematic transformation sequence.

As the user scrolls:

- a sleeping character appears in the night sky
- moon visible on the right side
- moon slowly moves behind the head
- moon transforms into rising sun
- stars fade naturally
- sunrise colors spread across the sky
- eyes slowly open emotionally
- brushing transformation begins
- clothes dynamically transform
- luxury black suit assembles onto the body
- tie wraps naturally
- silver chain appears subtly
- expression becomes fresh, confident, and successful

Overlay text at beginning:

“Scroll to wake me up”

Overlay text behavior:

- soft cinematic glow
- elegant typography
- fades away gradually while scrolling

VISUAL STYLE:

- Apple commercial aesthetic
- ultra cinematic lighting
- luxury motion design
- atmospheric storytelling
- dreamy sunrise atmosphere
- premium typography
- elegant transitions
- emotional visual pacing
- minimal interface
- immersive experience

BACKGROUND STYLE:

- cinematic clouds
- atmospheric sky depth
- realistic sunrise glow
- subtle particles
- smooth gradients
- cinematic contrast
- emotional lighting transitions

CANVAS SYSTEM:

Create a fullscreen sticky canvas section.

The canvas remains fixed while scrolling through the cinematic sequence.

Use GSAP ScrollTrigger to:

- pin the hero section
- map scroll progress to frame index
- smoothly animate frame progression

PERFORMANCE OPTIMIZATION:

- lazy load image frames
- optimize rendering heavily
- maintain smooth FPS
- avoid memory overload
- compress image handling
- prioritize smoothness over extra effects

PORTFOLIO TRANSITION:

After the cinematic sequence ends:
smoothly transition into premium portfolio sections.

PORTFOLIO SECTIONS:

- About Me
- Selected Work
- Video Editing Portfolio
- Graphic Design Portfolio
- Testimonials

- Contact Section

PORTFOLIO STYLE:

- premium
- minimal
- cinematic spacing
- elegant typography
- subtle motion
- luxury presentation
- smooth fade reveals
- dark-to-light visual progression

IMPORTANT RESTRICTIONS:

- no generic templates
- no cheap UI
- no cartoonish effects
- no cluttered layouts
- no excessive buttons
- no traditional portfolio feeling

The cinematic image sequence is the MAIN storytelling element of the website.

The final experience should feel like:
a luxury Apple-style cinematic interactive film mixed with a futuristic creative portfolio.
